**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23 and 26-42, drawn to a transgenic plant and vector comprising a heterologous DNA encoding double stranded nematode RNA sequence, and a plant transformation method classified in class 800, subclass 279, for example.
- II. Claims 24-25, drawn to animal feed, classified in class 426, subclass 623, for example.
- III. Claim 43, drawn to a pharmaceutical composition derived from a transgenic plant, classified in class 424, subclass 464, for example.

For the invention of Group I, Applicant is also required to elect one of the following nematode sequences :

- A) nematode major sperm protein
- B) RNA polymerase II
- C) Chitin synthase RNA D) nematode embryonic lethal phenotype gene
- E) nematode sterile phenotype gene.

The inventions are distinct, each from the other because of the following reasons:

The inventions A-E are unrelated because they are directed to divergent products having different structure, composition and function. The restriction requirement between inventions A-E is subject to the nonallowance of the linking

Art Unit: 1638

claim(s), 1 and 42. Upon the indication of allowability of the claims 1 and 42, the restriction requirement as to inventions A-E shall be withdrawn.

Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product, and the species are patentably distinct (MPEP § 806.05(j)). In the instant case, the intermediate product is deemed to be useful as a parent in plant breeding and the inventions are deemed patentably distinct because there is nothing on this record to show them to be obvious variants.

Inventions I and III are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product, and the species are patentably distinct (MPEP § 806.05(j)). In the instant case, the intermediate product is deemed to be useful as a parent in plant breeding and the inventions are deemed patentably distinct because there is nothing on this record to show them to be obvious variants.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the instant specification does not disclose that the animal feed of Group II and the pharmaceutical composition of Group III can be used together. In addition, different inventions have different structures, composition, functions and use.

Art Unit: 1638

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, their recognized divergent subject matter for the reasons given above and the inventions require a different field of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
